TURNTABLE S 080

Turntable S 080 for indoor use:

The S 080 is a compact turntable that is recommended for indoors as a standing model and may be fixed to a ground plate through 4 existing holes in the turntable's bottom rim. The S 080 is a reliable turntable for various constructions, allowing up to 5 kg (11 lbs) centric load. The plastic elements supported by a ball bearing on the outer rim of the top plate can withstand the maximum load over several weeks, so that this turntable may often be used for either short time applications at POS or over several months of presentations in shop windows.

Features:

- white ABS-plastic housing and turn plate
- bottom plate with mounting holes
- peripheral ball bearing for preventing tilting effect
- safety clutch
- very silent
- maintenance-free
- lamp max. 60 Watt (using S 080 S)

Technical Data

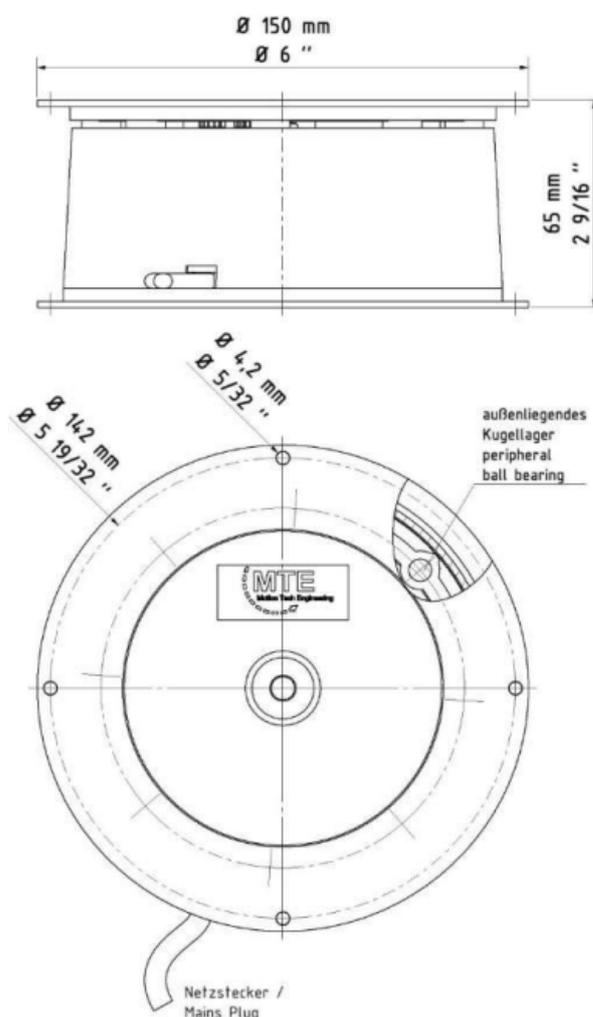

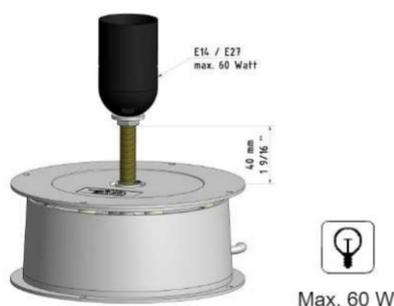

S 080

- max. centric load: 5 kg (11 lbs)
- total height: 65 mm (2 9/16 ")
- nominal voltage: 220 to 240 V, 50 Hz, optional 115 V, 60 Hz
- motor power consumption: 4 W
- rotation speed: 2 rpm, rotating clockwise
- dead weight: 0.41 kg

Additional Features (on demand / on surcharge):

- country-specific plug
- rotation direction: counterclockwise
- other rotating speeds
- with hollow tube (see below)
- **further options on request**

SW 200 H (with steady hollow tube)

Additional Features (on demand / on surcharge):

- same as S 080
- other length of the hollow tube
- other lamp holder
- **further options on request**

Technical Information:

The rotation speed in the 60 Hertz grid (US version) is approx. 20% higher than in the 50 Hertz grid. Higher rotation speed can reduce the maximum load, so that the above mentioned characteristics are no longer valid.
